HEAD AND SHOULDERS PATTERNS

What Is the Head and Shoulders Pattern?

A head and shoulders pattern is used in [Technical analysis](#). It is a specific chart formation that predicts a bullish-to-bearish trend reversal. The pattern appears as a baseline with three peaks, where the outside two are close in height, and the middle is highest.

The head and shoulders pattern forms when a stock's price rises to a peak and then declines back to the base of the prior up-move. Then, the price rises above the previous peak to form the "head" and then declines back to the original base. Finally, the stock price peaks again at about the level of the first peak of the formation before falling back down.

The head and shoulders pattern is considered one of the most reliable trend reversal patterns. It is one of several top patterns that signal, with varying degrees of accuracy, that an upward trend is nearing its end.

- A head and shoulders pattern is a technical indicator with a chart pattern of three peaks, where the outer two are close in height, and the middle is the highest.
- A head and shoulders pattern—considered one of the most reliable trend reversal patterns—is a chart formation that predicts a bullish-to-bearish trend reversal.
- An inverse head and shoulders pattern predicts a bearish-to-bullish trend.
- The neckline rests at the support or resistance lines, depending on the pattern direction.

DOUBLE TOP AND DOUBLE BOTTOM

What Is Double Top and Bottom?

Double top and bottom patterns are chart patterns that occur when the underlying investment moves in a similar pattern to the letter "W" (double bottom) or "M" (double top). Double top and bottom analysis is used in [Technical analysis](#) to explain movements in a security or other investment, and can be used as part of a trading strategy to exploit recurring patterns.

TRIPLE TOP AND TRIPLE BOTTOM

Price patterns are seen in identifiable sequences of price bars shown in [Technical analysis](#) charts. These patterns can be used by to examine past price movements and predict future ones for a particular trading instrument. Readers should already be familiar with [Trendlines](#), [continuation price patterns](#) and [Reversal price patterns](#).

In this article, we will explore how to interpret the patterns once they have been identified and examine the rare but powerful [Triple top](#) and [Triple bottom](#) patterns.

- A triple top is formed by three peaks moving into the same area, with pullbacks in between, while a triple bottom consists of three troughs with rallies in the middle.
- While not often observed in everyday market trading, triple tops and bottoms provide compelling signal to technical traders for trend reversals.
- In addition to chart shapes portraying the letters "M" or "W", trading volume trends should also be employed to confirm the strength of the signal
